Relations Committee staff, regarding our earlier conversations about the number of Greek political prisoners under the present regime as compared with those during the Papandreou period. I explained that, after checking with the experts, I found it could be argued, as a State Department witness had testified, that there were more political prisoners under Papandreou than now, on the basis that when the Papandreous first came into power there were nearly 1,000 all but a handful were released during the Papandreou government whereas today there are approximately 500 political prisoners still incarcerated. Paul agreed with me that the way the figures had been presented by the Department witness gave a misleading impression but said that he had explained the true facts to Chairman Fulbright.
